

In the Specification:

Please amend paragraph [0030] as follows:

[0030] The present embodiment also provides a discharge circuit 66 coupled in parallel with ultra capacitor 60. Discharge circuit 66 includes a switch SW5 and a load 68. Upon the activation of switch SW5 such as during or prior to a servicing mode, ultra capacitor 60 is discharged through load 68. The resistance of load 68 may be chosen to limit the peak discharge current.
